

Aluminium reference materials 2015/2016

Optical emission spectroscopy • X-ray fluorescence • Calibration • Daily monitoring • Glow discharge • Standardization • Slope correction

Reference chart for atomic and mass spectrometry

LGC manufactures and supplies:

- Aqueous inorganic calibration standards
- Metallo-organic and petrochemical standards
- Solid metals Certified Reference Materials
- Plastics, coal and paint Certified Reference Materials
- User-specified custom calibration standards
- Over 40 unique Proficiency Testing schemes
- Expert technical support and customer service
- Other matrix materials including blood, soils and water

LGC Quality - ISO Guide 34 • ISO 9001 • ISO/IEC 17025 • ISO/IEC 17043

Metallo-organic standards are oil based and should be kept away from moisture. Preferably store the bottles of CRMs in a cool, dry location and leave uncapped for the absolute minimum time possible. Similarly, steps should be taken to maintain the purity and dryness of all solvents used for dilutions. LGC provides suitable solvents for the preparation of analytical working standards.

Container type is a common question. Plastics (e.g. HDPE, PP, Teflon) are generally better for aqueous samples and potentially introduce less contamination for low level analysis. Exceptions exist where glass may offer advantages, e.g. Hg, Os, I, Br and some ion chromatography analyses including nitrite. Glass containers offer advantages for solvent-based (e.g. xercesene, xylene, biodiesel) materials; however plastics can typically be used for short term storage without issues.

LGC manufactures and supplies:

- Aqueous inorganic calibration standards
- Metallo-organic and petrochemical standards
- Solid metals Certified Reference Materials
- Plastics, coal and paint Certified Reference Materials
- User-specified custom calibration standards
- Over 40 unique Proficiency Testing schemes
- Expert technical support and customer service
- Other matrix materials including blood, soils and waters.

Introduction

LGC Standards provides the widest range of reference materials available from any single supplier. We work closely with leading manufacturers to provide improved access to reference materials, with an increasingly large range of parameters, for laboratories worldwide. LGC Standards has both extensive reference material sales experience and technical expertise that allows us to work in successful partnership with our customers. Furthermore, our network of offices in Europe, US, UAE, China and India provides fast product delivery supported by strong knowledge of complex import and export regulations.

About LGC and LGC Standards

LGC Standards is part of LGC, an established leader in laboratory services, measurement standards, reference materials and proficiency testing. LGC's Science and Technology Division acts as the designated UK National Measurement Institute (NMI) for chemical and bioanalytical measurement, and has a long history in the development and validation of analytical methods and in reference material production.

LGC's Science and Technology Division is accredited to ISO Guide 34 (General requirements for the competence of reference materials producers) for the production of reference materials.

Breitländer GmbH has been a reference material specialty company since 1972. LGC Standards acquired Breitländer in 2007, and together they offer the most extensive range of certified reference materials and standards for the metals industry. Breitländer also added high-quality sample preparation equipment to the LGC portfolio.

Industrial Analytical (Pty) Ltd was formed in 1988 to specifically meet ever-increasing industry demand for Reference Materials, for verification of both analytical results and quality of characterization. Industrial Analytical is now not only the largest Certified Reference Material supplier in the Republic of South Africa, but is also the largest in the African continent as a whole. Industrial Analytical was acquired by LGC Standards in 2012.

Analytical Reference Materials International (ARMI) was founded in 1984, and is a market leader in the chemical characterization and certification of metal alloy Certified Reference Materials. ARMI produces and distributes a diverse line of reference materials from Manchester, NH, USA into markets worldwide. ARMI developed and manages the Inter-laboratory Analysis Program (ILAP), whose member labs provide CRM certification data on an entirely voluntary basis. ARMI also provides a metal alloy PT program unique in the metals industry. ARMI became part of LGC Standards in 2012.

VHG Labs is an ISO Guide 34 accredited manufacturer and supplier of single-element, multi-element and custom blended petroleum, aqueous and solid analytical reference materials and calibration standards. Additionally, they provide consumables and supplies for ICP, ICP-MS, AA, GFAA and XRF instruments. VHG Labs calibration standards and reference materials are certified in their ISO 17025 accredited testing lab. VHG Labs became a part of LGC Standards in 2012.

This catalogue

This catalogue features certified reference materials and setting-up samples for the aluminium industry. It provides an updated and relevant listing of the available materials on the market. The products are listed in groups according to type and/or manufacturer. An index of all products is included in the back of the catalogue, listed by name and catalogue number.

Analytical values are presented in mass percentage, and should be considered to be typical or pilot values. Certificates that are supplied with purchased materials will present actual values. Values in brackets () are not certified and are listed for information only. A reference material lot will only include a limited number of standards, as it is difficult to maintain homogeneity when trying to produce larger lots. Follow-up lots of like material will differ slightly in composition and dimensions. Should you need an exact value, or more information on manufacture, material properties, methods or uncertainties prior to purchase, please do not hesitate to ask for more information.

Producers of reference materials

This catalogue brings together products from a wide variety of sources. These include certified reference materials from National Measurement Institutes, and also reference materials and setting-up samples from many different producers. Most products are supplied with certificates of analysis, although the layout and format of the certificates will vary according to the producer. Setting-up samples come with information sheets only.

The use of reference materials

Use of quality reference materials helps produce reliable analytical measurements and quality data, which ensures proper decision making going forward.

When choosing a matrix reference material for a particular application, the analyst should consider the following factors before selecting the material:

- Matrix match and potential interferences
- Analytes
- Quantitation range
- Measurement uncertainties
- Producer certification procedures
- Material documentation (e.g. certificate or report)

Certified Reference Material (CRM)

A CRM is accompanied by a certificate with one or more property values certified by a procedure which establishes its traceability to an accurate realization of the unit in which the property values are expressed. Each certified value is also accompanied by an uncertainty at a stated level of confidence. CRMs are certified by a recognized certifying organization using approved certification procedures as outlined in ISO Guide 35:2006, "Reference Materials-General and Statistical Principles for Certification." A CRM is an analytical reference material that is elevated to the highest order possible due to its traceability to SI units, and to the attributed confidence in the producing company or organization.

Reference Material (RM)

An RM is a material or substance with one or more property values sufficiently homogeneous and well established to be used to calibrate an apparatus, for the assessment of a measurement method, or for assigning material values. Interlaboratory testing is applied to RMs using many analysts, and RMs are then supplied with certificates of analysis. Testing does not usually follow all ISO Guide 35 certification guidelines. RM certificates often state that measurement data is traceable to primary CRMs.

Setting-Up Samples (SUS)

SUS materials should have minimal inhomogeneity, and are used to monitor or adjust lab instrument analytical signals. Instrument calibration is conducted using CRMs, RMs and SUS samples, at which time values are assigned to the SUS materials. As a result, SUS materials do not have certified analyses, but are assigned approximate values only. SUS standards are also referred to as "recalibration samples", "drift control samples" and "monitor samples."

General ordering information

Prices and delivery procedures are available from your local LGC Standards sales office.

Orders are accepted only in accordance with LGC Standards standard terms and conditions of sale, unless otherwise agreed to in advance and in writing.

LGC Standards technical staff are available to help customers requiring assistance with the use, application or suitability of a particular material. Customers should contact their local LGC Standards office for advice; contact details are provided on the back of this catalogue.

For any additional information please visit www.lgcstandards.com.

More catalogues

LGC Standards will release additional product catalogues in 2015 that cover the rest of our extensive range of reference materials and standards, for the following families:

- Copper base
- Non-ferrous base
- Precious metals
- Steel and iron
- XRF Glass
- Mechanical testing
- Combustion and wet chemistry analysis

Additional materials

This catalogue presents a wide selection of materials for aluminium analysis available at time of print. New materials are constantly added to our range, so we can often source products not listed in the catalog. Please contact us for assistance for help with a specific application, or if you cannot find the materials you need.

We also have many other associated materials for aluminium testing, available through other catalogs and listings, which include soils, waters, industrial materials, metals, ores, petroleum and many others.

Special milling machine HK81F

Technical features

Semi-automatic machine for reproducible surface preparation of non-ferrous metal samples for emission and X-ray spectrometer analysis.

- Compact desk-top machine
- Fully contained working compartment with halogen lighting
- Continuous setting of spindle and cutting speed
- Display of cutting speed, frequency, voltage and current
- Clean operation and millings collection container
- Automatic sample feeding with adjustable speed and exact depth setting.

The standard machine and control unit comes with the following accessories: three-point-chuck with reverse brackets, set of tools, lubricant, dust brush, tool for cutter positioning and exchange, transport handles.

LGC Standards

Your first choice in proficiency testing

LGC is an accredited international provider of Proficiency Testing (PT) schemes also known as External Quality Assessment (EQA) schemes. We have over thirty years experience in all aspects of providing PT services to laboratories undertaking chemical, clinical, microbiological, and physical testing and measurements.

LGC Standards annually runs over 1,500 proficiency testing exercises, serving more than 9,000 laboratories. We produce in excess of 200,000 test materials per annum which are distributed to over 150 countries worldwide.

We provide:

- PT schemes for food, beverages, environment, clinical, forensics, consumer safety and industrial sectors
- Managed solutions for in-house proficiency testing providers
- Training for participants and their customers.

Visit us at www.lgcstandards.com

@LGCStandards

LGC Quality - ISO Guide 34 • GMP/GLP • ISO 9001 • ISO/IEC 17025 • ISO/IEC 17043

Benefits of proficiency testing

There are many benefits associated with participation in a proficiency testing scheme or external quality assessment. Key is the independent assessment of performance and the opportunity to compare your performance with peer laboratories, often on a global basis.

Other benefits include:

- Monitor the quality of measurements made and thereby identify improvements required
- Greater process control
- Demonstrate competency to customers, accreditation bodies and other regulatory bodies
- Identify staff development and training needs
- Compare methods or procedures.
